

Raw Chat Export - Lab 4 VibeCoding (unedited transcript)

Date: 2026-10-01

Tool: opencode + Muse Spark

Repo: https://github.com/deeptanshukumar/57_match_three_gem

Note: exported from session directly - messages below are the raw user/assistant turns in order. No summarization.

USER (turn 1)

hey, im sending a mail here

ASSISTANT (turn 1)

(no user-facing reply - inspected workspace: read directory, README.md, main.py, game/ folder to understand context)

USER (turn 2)

hey, im sending a mail here, this is from my college [PDF 1] , please go through the repo and dont change anything (as you would get to know from reading. after reading, try launching the game using 'python3 main.py', the game crashes and doesnt launch! fix that. then ill record the video. then for every task we will iteratively implement the fixes as mentioned in the doc and the readme.md file.

application/pdf content: Lab 4: VibeCoding

Objective

Use Vibe Coding tools to fix the broken code and add features to the same. Learn how to prompt to get the job done in under three to four attempts. Clone a repo assigned to you, make changes and push to your repo in your personal account.

THIS IS AN INDIVIDUAL ASSIGNMENT. WORK INDIVIDUALLY!!

Duration

60 minutes

Software Requirements

- Access to Vibe Coding tool. (ChatGPT, Gemini, Claude etc)

Instructions:

1. Go to the repo assigned to you
2. Go through the ReadMe file to understand the deliverables
3. Clone or Fork the repo
4. Run the Python based code (A game/ A Puzzle)
5. Record 10 seconds of video before making any changes.
6. Write prompts and fix the broken code
7. Write prompts to add all the features listed in the ReadMe file of the repo one by one.
8. Record another 10 seconds of video again after making all the changes.
9. Push the code to your repo.
10. Have Separate Commits for each task
11. Do not raise PR to the main repo (SETAPESU26)

Deliverables:

Upload the following to your Lab repo under Lab-4 folder,

- a. Videos (before and after)
- b. Updated Code
- c. Chat history exported as a doc/pdf

ASSISTANT (turn 2)

Game launches now. Fixed the startup crash, nothing else touched.

****Root cause:**** `game/board.py:127` in `drop\_and\_refill()` used variable `c` with no outer column loop -> `NameError: name 'c' is not defined` on `reset()` -> `resolve\_matches()`.

****Fix:**** wrapped the logic in `for c in range(GRID\_SIZE):` with `empty\_slots` reset per-column. Verified:

- 50x `reset()` with no `None`s and no leftover matches
- `python3 main.py` stays running (timeout 124 = good, no traceback)

Deliberate lab bug in ``process_swap()`` (``moves_remaining -= 1`` before match check) is still intact, and Tasks 1-4 are untouched.

Next steps for you:

1. Run ``python3 main.py`` and record your 10-sec **before** video (shows fixed launch + invalid-swap bug)
2. Tell me when to start **Task 1: invalid swap move deduction** and we'll do them one-by-one

USER (turn 3)

alright lets build one by one

ASSISTANT (turn 3)

Task 1 done.

Change in ``game/board.py:process_swap``: moved ``self.moves_remaining -= 1`` to after the ``if not matches: revert`` check, so it only runs on successful swaps.

Verified:

- Invalid swap: ``20 -> 20``, returns ``False``
- Valid swap: ``20 -> 19``, score ``0 -> 30``, returns ``True``

Say the word and I'll do **Task 2: cascade combo bonus scoring**.

USER (turn 4)

alright now, task 2 please

ASSISTANT (turn 4)

Task 2 done.

Change in ``game/board.py:resolve_matches``:

- Added ``combo`` counter, ``total_points += len(matches) * 10 * combo`` per cascade level (1x, 2x, 3x...)
- Returns points instead of count; ``process_swap`` now does ``score += points``
- Added ``last_combo`` (reset to 0, set after each resolve). ``reset()`` still gives 0 score.

Verified:

- 3-clear single: 30 pts, combo 1
- 3 then 4-clear: 30 + 80 = 110 pts, combo 2
- 3x3 chain: 30 + 60 + 90 = 180 pts, combo 3
- Real swap gave combo 2 with 90 pts, Task 1 still holds, game launches

Ready for **Task 3: 4-in-a-row bomb gems** when you are.

USER (turn 5)

please solve task 3 now

ASSISTANT (turn 5)

Task 3 done.

Changes in ``game/board.py``:

- ``Gem`` now has ``is_bomb`` + ``bomb_dir`` (``row`/`col``)
- New ``find_match_groups()`` to detect runs ≥ 3 with orientation; ``find_matches()`` expands via ``_expand_bombs()`` so a matched bomb adds its full row/column (chain-aware)
- ``resolve_matches()`` spawns 1 glowing bomb per 4+ run (middle cell, same color, kept not cleared)
- ``process_swap()`` bomb-swap detonates immediately via ``_collect_bomb_blast()`` even without color match, then continues cascades with combo scoring
- ``render()`` draws bombs with pulsing yellow-white glow + core dot

Verified:

- 4-horizontal -> bomb at middle with `row` dir, 40 pts
- Bomb in match -> full 8-cell row/col blast
- Bomb swap -> valid, `20->19`, 80 pts for row clear
- Task 1 (invalid no-deduct) + Task 2 combos still hold, 30 resets stable, game launches + renders

Ready for **Task 4: idle hint indicator** when you are.

USER (turn 6)

next onto task 4

ASSISTANT (turn 6)

Task 4 done - all 4 tasks complete.

Changes:

- `game/board.py:find\_hint()` - simulates every adjacent swap (lightweight grid swap, no anim side-effects), returns first pair that yields `find\_matches()`; fallback to any adjacent bomb swap since bombs always detonate; returns `None` if board unsettled.
- `game/game\_engine.py` - added `HINT\_DELAY\_MS=5000`, `last\_action\_ms`, `hint\_pair`. Clicks/`reset()` reset timer + clear hint. `update()` computes hint only when idle $\geq 5s$, settled, and not game-over. `render()` draws pulsing yellow outline (sin width 3-6px) over both hint gems.

Verified:

- 10 random boards all yield adjacent, truly-valid hints
- No hint instantly, hint appears after simulated 6s idle
- Click clears hint + resets timer; no hint while animating or game-over
- Render with hint doesn't crash; Task 1 still holds; game launches

You can now record the **after** video (`python3 main.py` - wait 5s idle to show hint, make a 4-match for bomb, chain for combo). Want help with separate commits + chat export for submission?

USER (turn 7)

yes, can you help make separate commits for each task?

ASSISTANT (turn 7)

Done - 5 separate commits pushed to `origin/main`:

- `6e6e736` Fix launch crash: missing column loop in `drop\_and\_refill`
- `d86760f` Task 1: invalid swap move deduction
- `7124bb5` Task 2: cascade combo bonus (1x/2x/3x)
- `db67932` Task 3: 4-in-a-row bomb gems
- `129bbf9` Task 4: idle hint indicator (5s)

Verified final files match tested versions, `\_\_pycache\_\_` left untracked, no PR raised.

Still needed for submission: before/after videos + chat export under Lab-4 folder. Want help with that?

USER (turn 8)

can you export the chat in pdf?

ASSISTANT (turn 8)

PDF ready - 2 pages, valid.

File: `LAB 4/57\_match\_three\_gem/Lab4\_Chat\_History.pdf`

- Covers assignment context, all prompts in order, fixes per task, final 5-commit history with hashes, files changed, verification, and remaining video steps
- Note included: no hosted chat link exists in opencode CLI, so this transcript serves as the chat history

I left it ****uncommitted**** (game repo stays clean with just the 5 code commits already pushed). Copy it to your Lab repo `Lab-4` folder along with the before/after videos for submission.

Want me to also copy it up to `LAB 4/` or help with the video/commit log for the Lab repo?

USER (turn 9)

nooo, export this chat as is, raw

ASSISTANT (turn 9)

(this file - raw export generated on request)

END OF RAW EXPORT
